Forecast for Sunday 28 Mar 2021

Weather: A bright, chilly morning with a few well scattered snow showers. Showers will give way to thicker cloud spreading northeast across the Perthshire Hills and into the southern Cairngorms shortly after, bringing sleet or snow, this quickly turning to rain at all levels along with extensive hill fog. The Angus and Aberdeenshire Hills will see marked shelter from the rain.

Chance of cloud free mountain/hill tops above 800m: 70% decreasing to almost no chance from the south from mid-morning. 10-20% for the Angus and Aberdeenshire Hills.

Visibility: Morning showers will be well scattered but may reduce visibility to only a kilometre or so and bring patches of cloud down to 400-600m. Otherwise cloud will be well broken and most summits clear until cloud thickens from the south widely to 400-600m. Below this, rain will reduce visibility to several kilometres, perhaps less at times.

Met Office Aberdeen Meteorologist's View

Winds closer to 80mph on summits through evening. Best conditions through morning ahead of cloud and heavy rain.

Forecast for Monday 29 Mar 2021

Weather: Strong southwest winds continue to drag mild and moist air in off the Atlantic to bring contrasting conditions across the ranges. Persistent rain for the Perthshire Hills well as the Southern Cairngorms. Conversely, the eastern ranges will see marked shelter, especially the Aberdeenshire Hills where there will be bright or sunny spells.

Maximum wind: Southwest 25-35 gusting 40-50mph but 40-50mph gusting 60mph across highest ground early and late.

Chance of cloud free mountain/hill tops above 800m: 90% for the Aberdeenshire Hills, 40% for the eastern Cairngorms, otherwise 10% at best.

Visibility: Cloud will be extensive above 500-700m, often lower across south or southwest facing slopes, bringing fog conditions widely on the hills. Heavy rain will leave glens rather hazy and reduce visibility to several kilometres below the cloud base in the west, but much improved across the more sheltered north and east.

Temperature: **Glens:** 11C rising 13-15C.
At 800m: 2C rising 4 or 5 C.
Freezing level: Well above summits.
